

Sulfate Resistance Portland Cement

This Portland Cement which is Sulfate resistant has similar qualities of Portland Cement including the resistance to sulfate which is present in the water and prevents attack from such sulfate while water crosses the structure. This is selectively procured from key manufacturers and gives an eminent strength to the structure.

Uses of SRPC : This variant of Portland cement is used in places where sulfate resistance is required which is present in water.

Physical Properties : It provides protection from sulfate present in the water and has grey color with no odor.

Solubility in Water : It is not soluble in water and strengthens with water .
